INTERPORTO BOLOGNA

THE COMBINED FREIGHT TRANSPORT

Eu scenario and Forecast

**Unaccompanied Rail-Road Transport
Transport flows per corridor (2005)**

Capacity gap 2015 (Inland Terminals)

Total international combined transport

Market segment	2002 (net tonnage)	2015 (net tonnage)	2002/2015
Unaccompanied combined transport	44.1 mill. t	103.6 mill. t	+ 135 %
Accompanied combined transport (rolling highway)	10.4 mill. t	12.4 mill. t	+ 19 %
Total combined Transport	54.5 mill. t	116.0 mill t	+ 113 %

INTERPORTO BOLOGNA

THE ROLE of FV

DEFINITION OF FREIGHT VILLAGE

A **freight village** is a defined area within which all activities relating to transport, logistic and distribution of goods, both for national and International transit are carried out by various operators.

A freight village must also be equipped with all the public facilities to carry out the above mentioned operations. In order to encourage intermodal transport for the handling of goods, a freight village must preferably be served by a multiplicity of transport modes (road, rail, deep sea, inland waterway, air).

ROLE OF FREIGHT VILLAGE

- Offer alternative transport solutions more efficient and complete
- Combine different modes of transport to move freight from origin to destination (***comodality***)
- Manage the exponential increase of freight transport in the optimal way

MAIN OBJECTIVE

INTERMODALITY/COMODALITY

INTERMODALITY / COMODALITY

Maritime Connections

INTERPORTO BOLOGNA

Figures and Specifications

INTERMODAL FACILITIES

- 2 TERMINALS of about 14 Ha each.
- Bulk Terminal (*800.000 € investments*)
- 7 mobile cranes / 42 tons
- Total Storage Capacity – 8.000 TEU
- Total handling volume 127.000 Loading Units
- Future handling capacity – 300.000 Loading Units

FIGURES 2005 vs 2006

	2005	2006
1. Total freight transport	4.510.000 tonn	5.002.000 tonn
<i>Rail</i>	2.210.000 tonn	2.432.000 tonn
<i>Road</i>	2.300.000 tonn	2.570.000 tonn
2. Intermodal trains	132/week	196/week
3. Wagons	29.102	56.412
4. Transport and logistics companies	100	100
5. Increase of logistics demand	150.000 covered sqm	350.000 covered sqm

INTERPORTO BOLOGNA

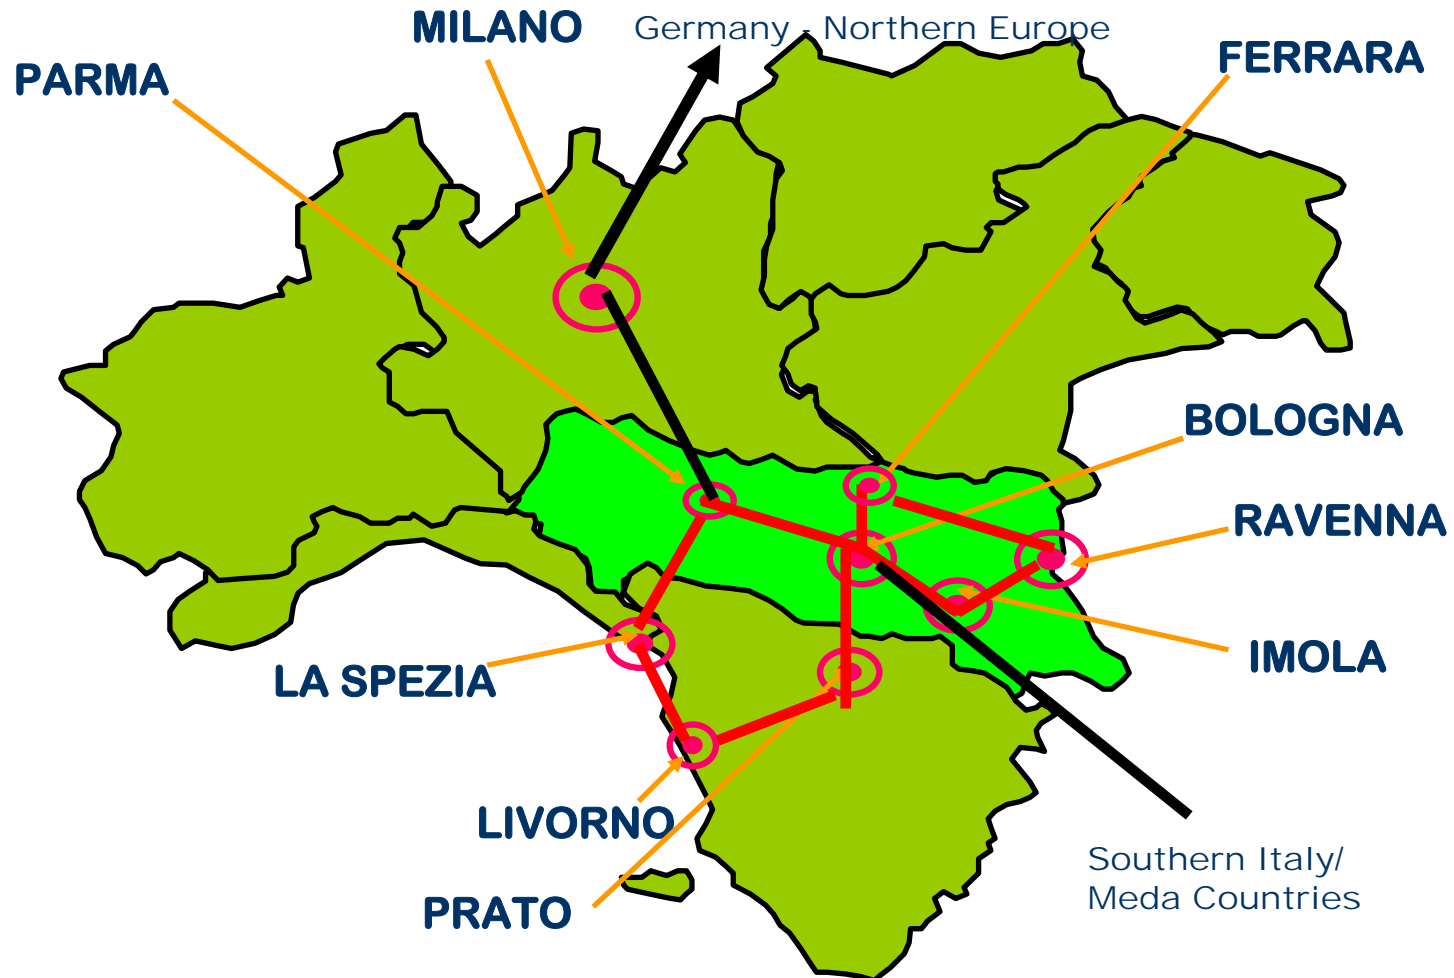

Initiatives and strategies

INTERMODAL RAIL SERVICES

1. Eight Project – Connections with ports of Leghorn and Ravenna
2. Bologna – Ravenna connection
3. Train “ESPRESSO” Bologna - Marcianise
4. Gravel trains

THE EIGHT RAIL SERVICE

The eight - a good case to develop intermodal services

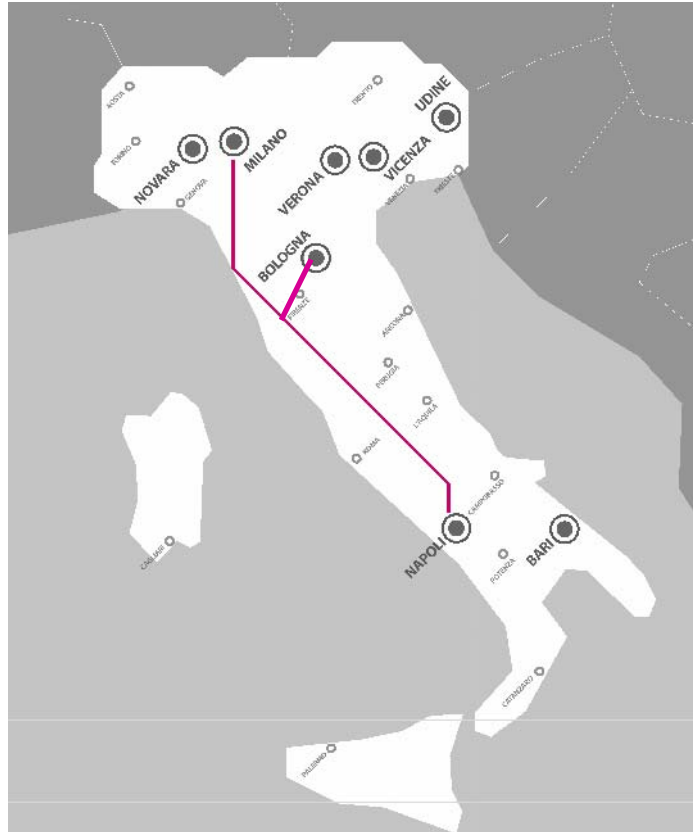

Bologna-Ravenna rail service connection Sinergy between maritime port and Freight Village

**2 Trains per week
8500 Lorries/year shifted
from Road to Railway**

BOLOGNA - MARCIANISE

Rail Service “ESPRESSO”

5 trains per week

8.080 wagons operated

Door 2 door services

**Rail/Road connection to
operate complete services
taking care of last mile
delivery (daily connections
between two freight villages)**

GRAVEL TRAINS

4 trains per week
Transporting 184.000 ton/year

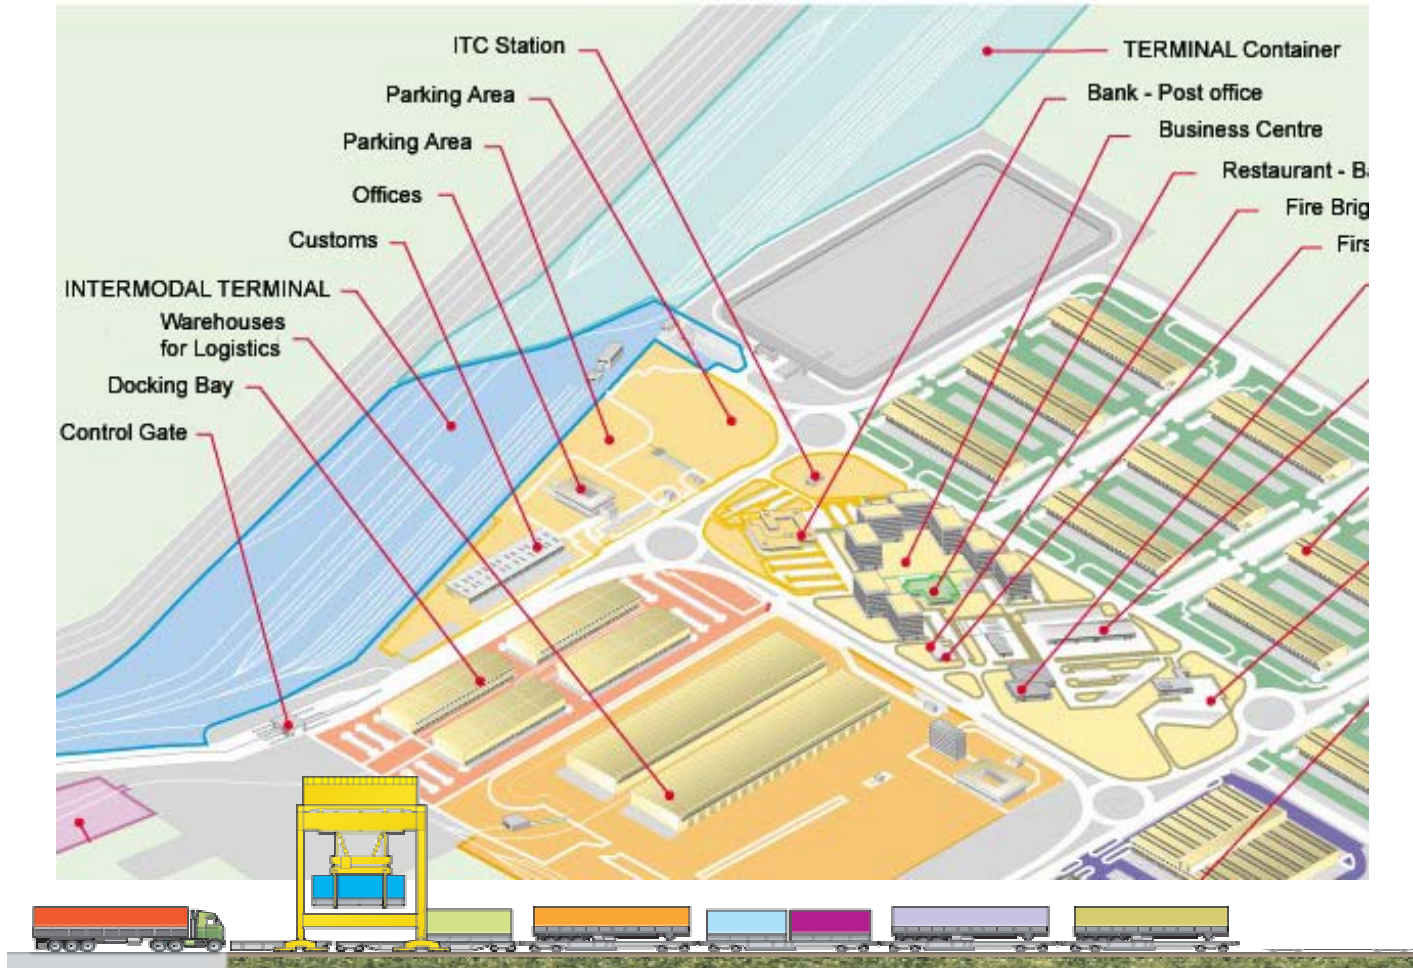

INTERPORTO BOLOGNA

IT Solutions Supporting Rail activities

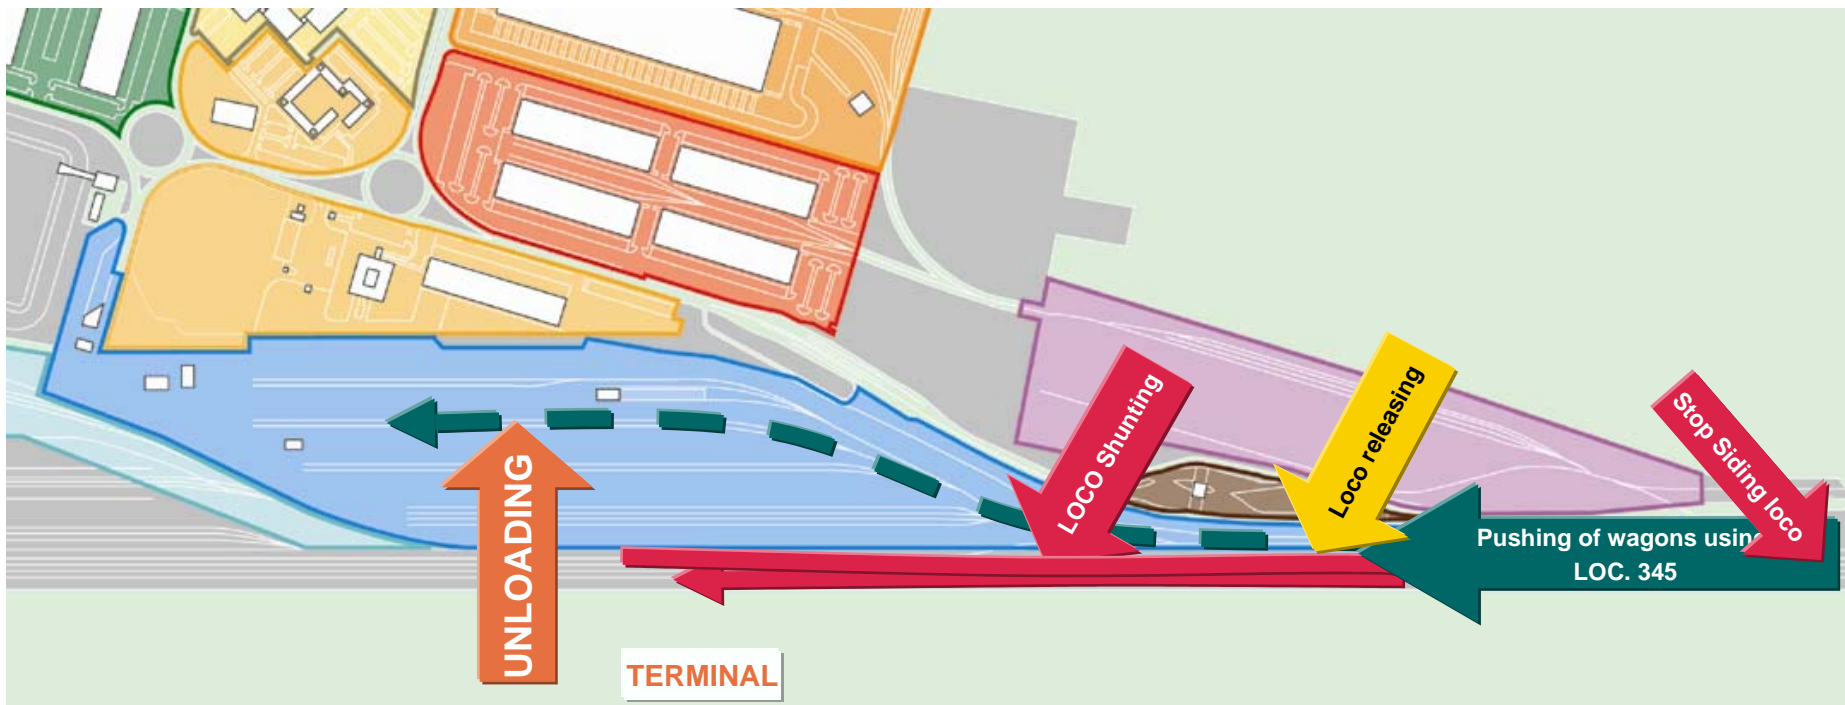

SHUNTING within TERMINAL Area

SHUNTING within TERMINAL Area

Shunting Sequence for train arrival

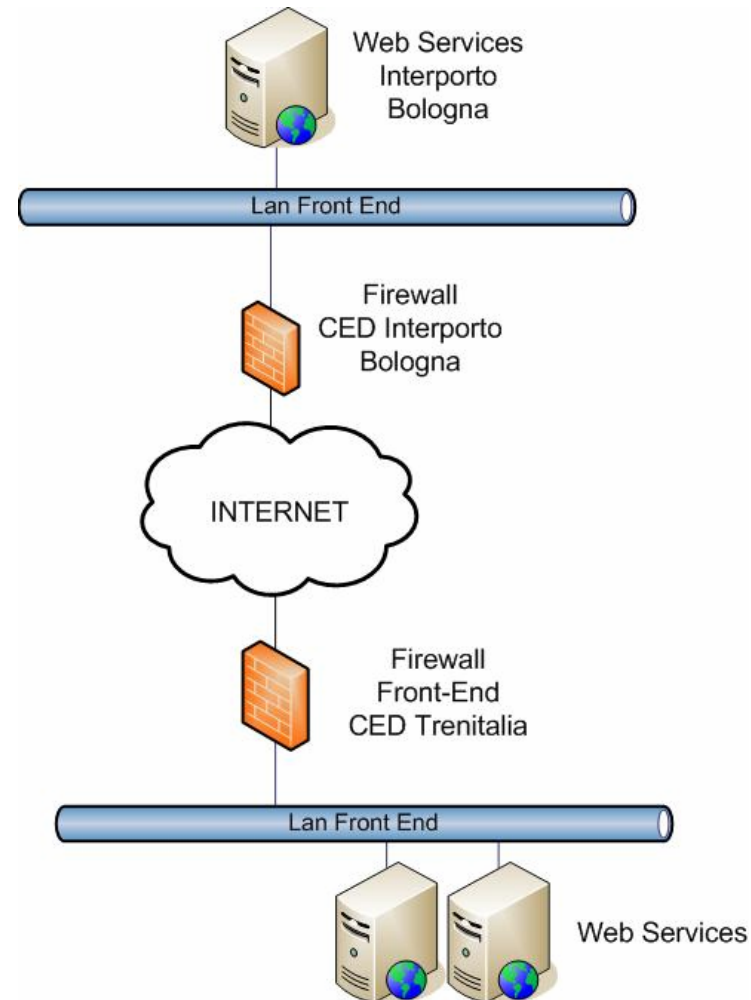

TMOVE – Shunting solution

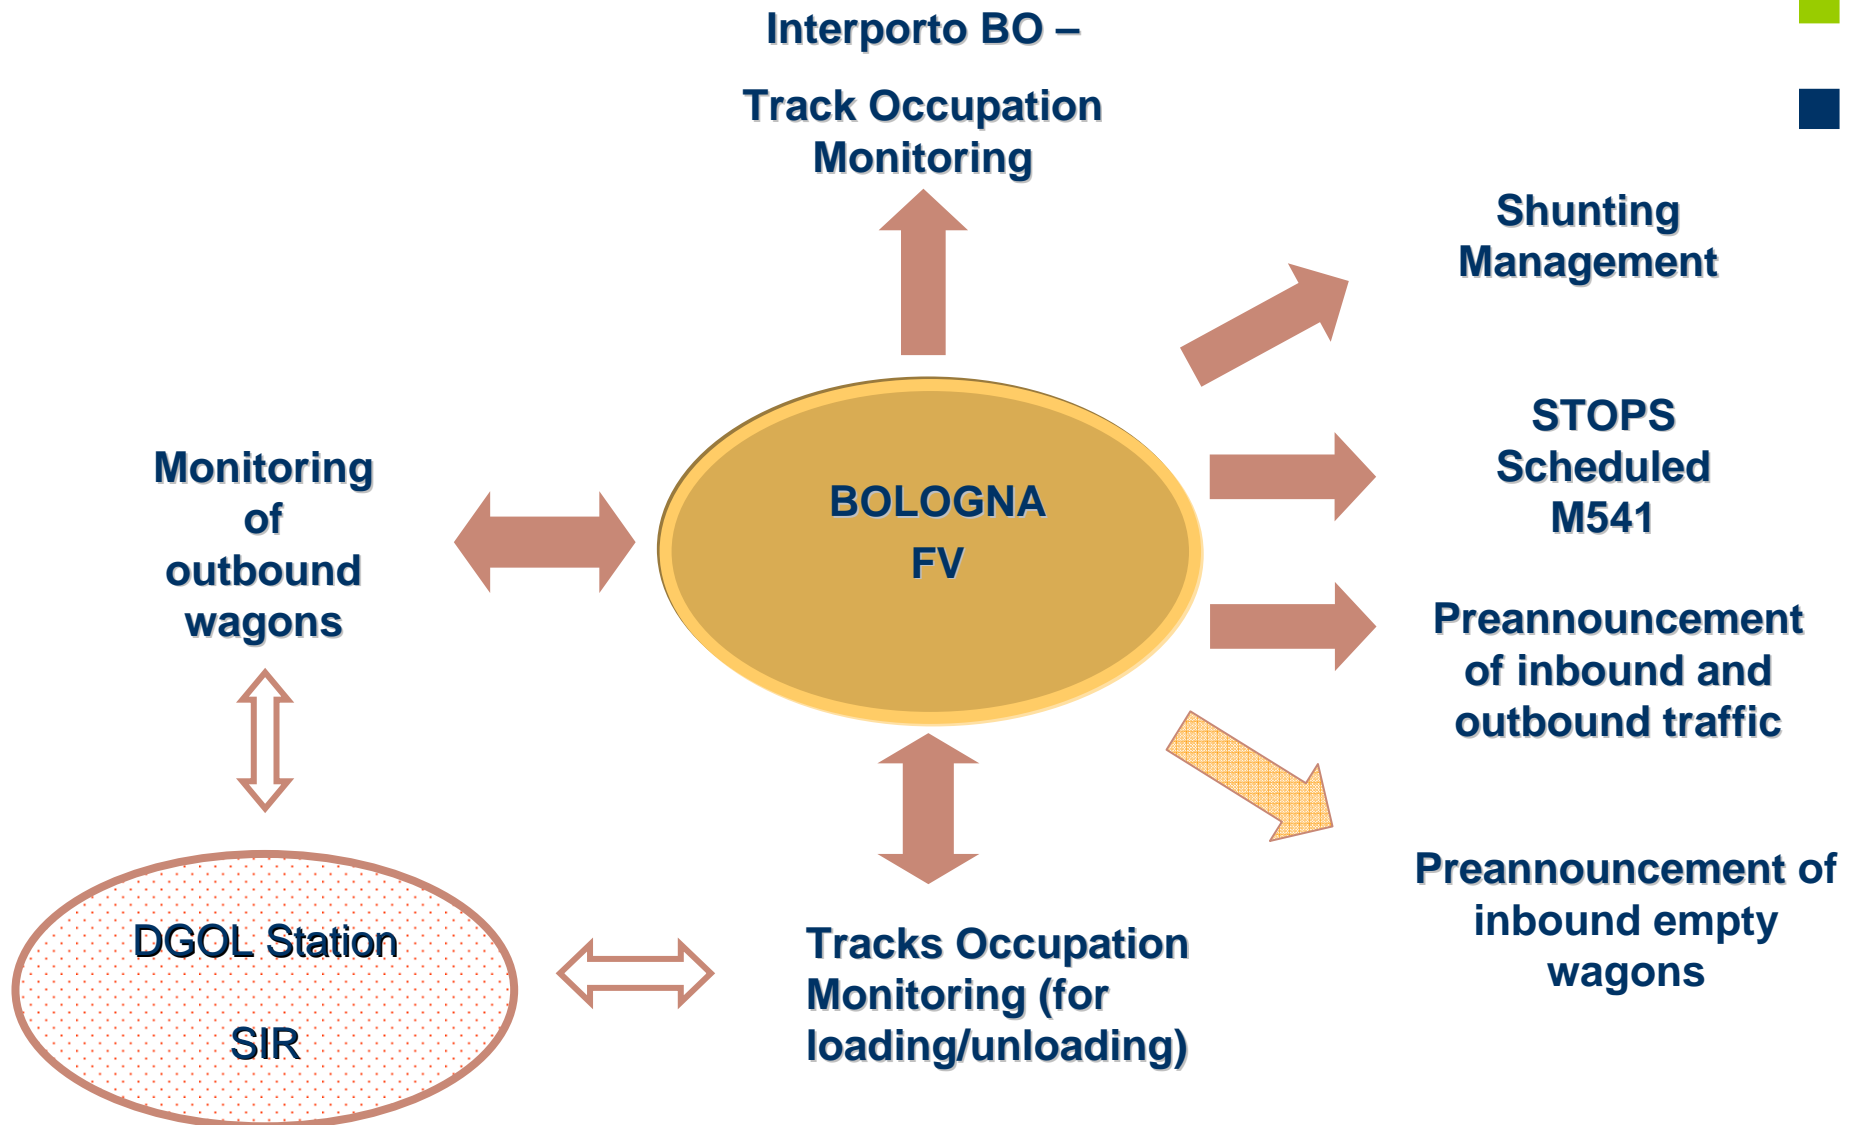

Data exchange with TRENITALIA takes place by 2 Internet Web Services :

-Web Service 1: is located in the T_move server which is used for conforming TMOVE with SIR data;

- Web Service 2: is located in the Trenitalia CED. It acquires all updates from T_move server and process useful information to send to T_move server itself

TMOVE – Shunting solution

TMOVE – Shunting solution

IN BOUND Process

- Trains and wagons with final destination IPBO, are monitored from departure to their stop on the track for loading and unloading operations
- Real time evaluation of ETA, details on the full delay on route.
- Composition of the train** : type of goods, wagons allocation, wagon features

Planning:

- Shunting (loco used, shunters workshift)
- Loading/unloading operations and related production activities
- Stop reduction time at siding

The picture shows:

- Tracks
- siding tracks for loading and unloading Operations

The tracks occupation is updated in real time starting from the shunting operations up to the arrival and departure time.

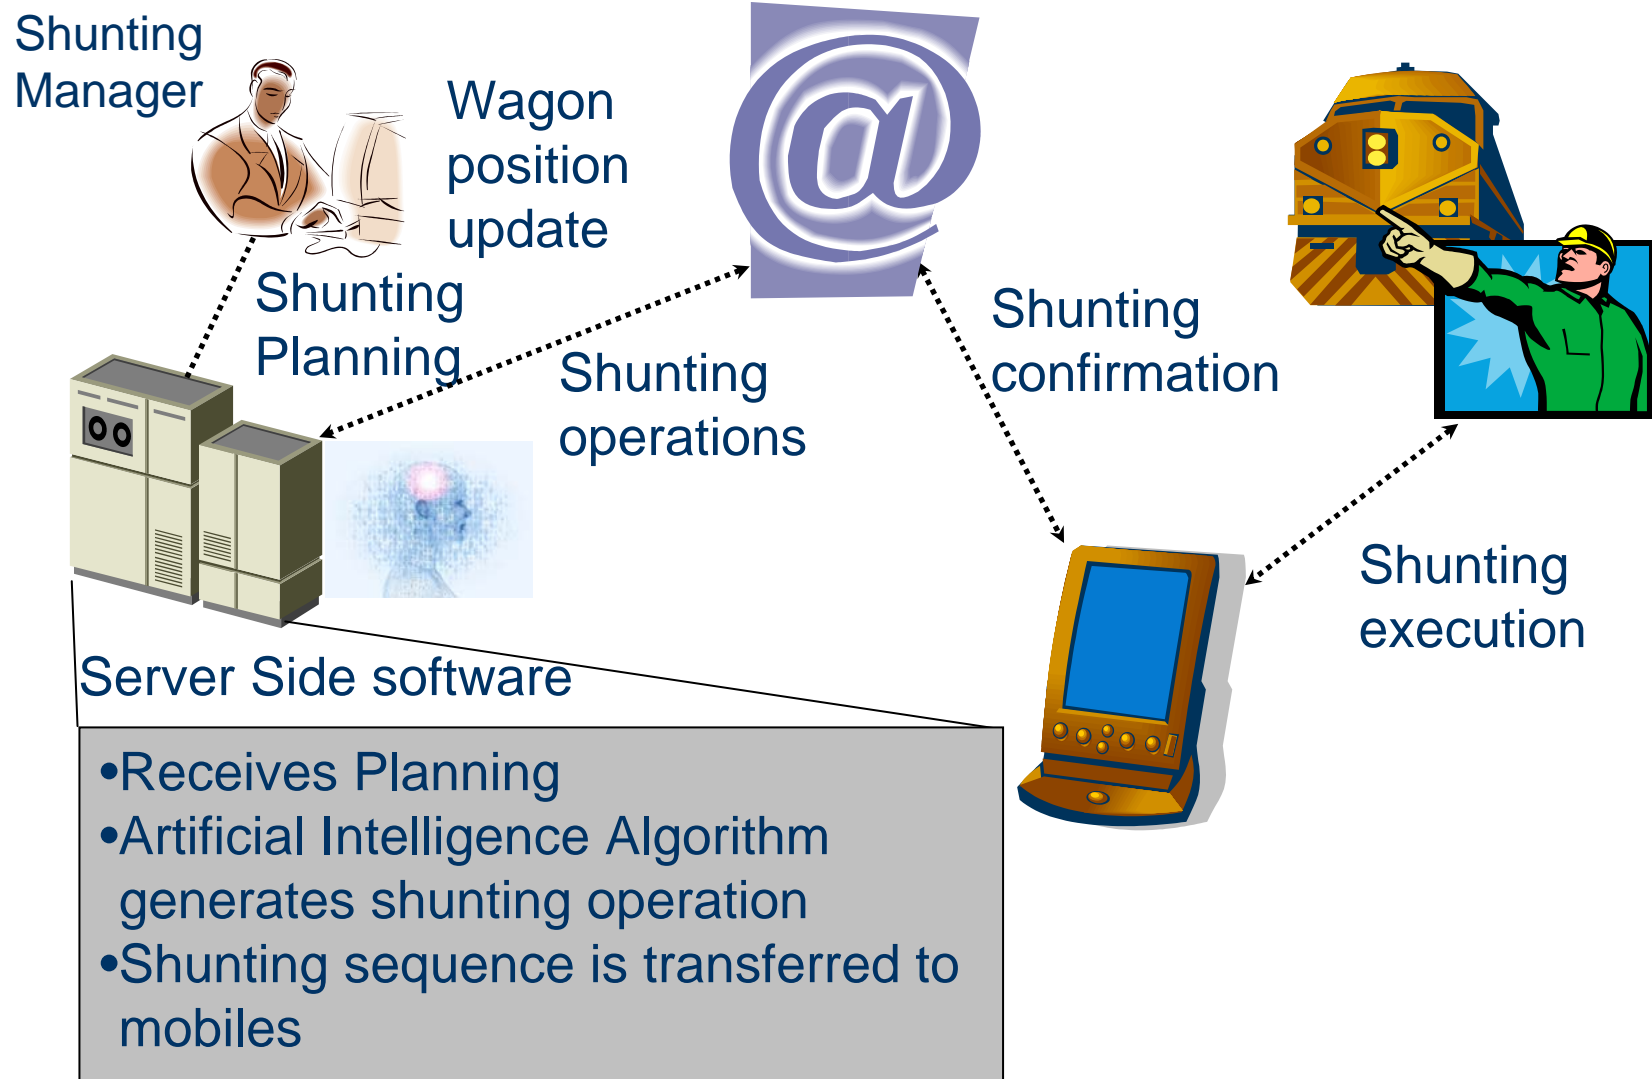

SHUNTER – Shunting Automation

- Requirements
 - Generate shunting operation in situation where more than one train has to be composed;
 - Allow to set up priorities for trains;
 - Minimize the number of shunting operation;
 - Consider current way in which shunting is performed;
 - Consider shunting among different terminals inside the same freight village

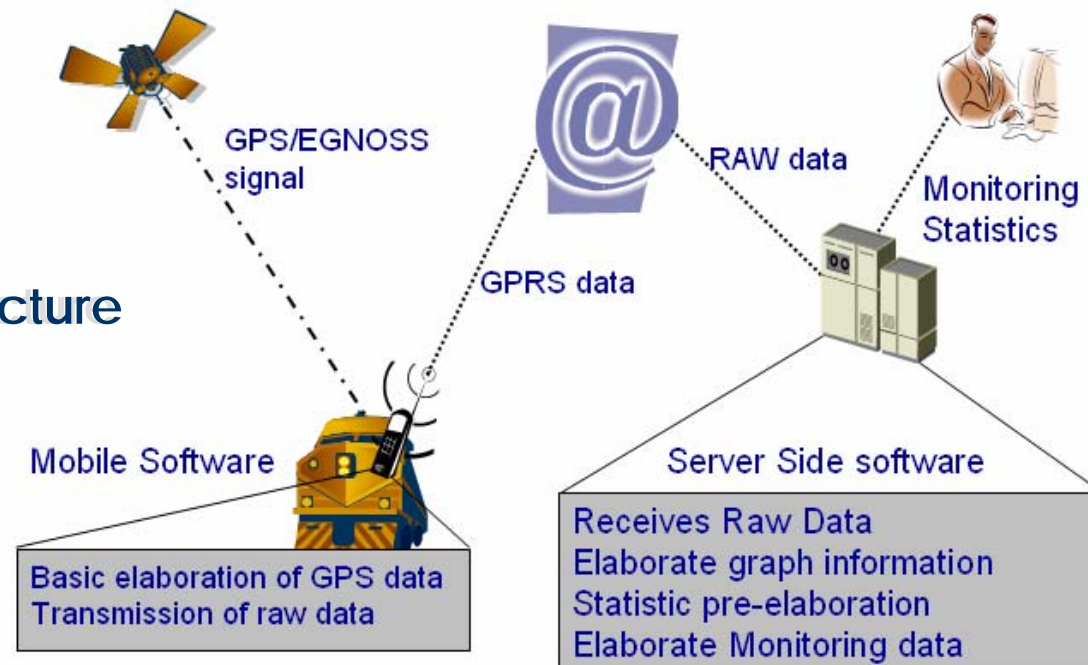

SHUNTER – Shunting Automation

SIMOG – GPS Monitoring

- Requirements:
 - Monitoring of locomotive position (for security reason);
 - Monitoring of locomotive speed (for security reason);
 - Generation of statistics related to paths, timetables, and several other parameters;
 - History of alarms.
